1.5.2. Chromatogram of the customer's sample

1.5.3. Overlay

The expected specific markers of *Myrciaria dubia* (Kunth) McVaugh are found in the customer's sample. The HPLC profile of the customer's sample is similar to the botanical reference. The ratios of the compounds of interest are mainly respected and it does not seem that there is any spiking in ascorbic acid in the sample. We cannot conclude about the naturality of any compound but the overall profile is compliant and the sample still looks of good quality.
